

## Hands-On: Optimise your CAD/CAM Workflow: 7 Steps to Clinical Efficiency

### HANDS-ON WORKSHOP

Limited to x10  
participants

#### What You'll Learn:

- Understand the Full Digital Workflow: From onlay prep to final cementation, gain confidence in every step of the indirect restoration process.
- Master Deep Margin Elevation: Learn techniques and materials for predictable, long-lasting results.
- Scan & Mill in Real Time: Experience state-of-the-art scanning and milling technology in action—see the entire process with live demonstrations.
- Polish & Characterise: Practice hand-polishing an Initial LiSi Block crown and characterising one for life like aesthetics.
- Material & Cement Selection: Understand how to choose the right materials and cements for optimal outcomes.
- Long-Term Success: Learn how to maintain your restorations and involve your patients in the process.

RL earned her Doctor of Dental Medicine degree in the Philippines and brings over 20 years of experience in the dental industry. She refined her clinical expertise and management skills through her own dental practice, delivering comprehensive patient care. Her commitment to oral health led her to Singapore's Health Promotion Board School Dental Services, where she practiced and focused on advancing oral health programs for schoolchildren. Now, as part of the Professional Development team at GC Australasia Dental, RL leads training and education initiatives across the region, specializing in fibre technology, aesthetics, and adhesive and restorative dentistry, helping clinicians elevate their skills and patient outcomes.
